

Michael Panashe Mudimbu

Fullstack Software Engineer | React, TypeScript & Python | AI Solutions, SaaS Products & Production Systems

Harare, Zimbabwe | +263 782 464 219 | michaelmudimbu@gmail.com

Portfolio: <https://michaelmudimbu.vercel.app> | GitHub: <https://github.com/micpana> | LinkedIn: <https://www.linkedin.com/in/michael-p-mudimbu/>

PROFESSIONAL SUMMARY

Fullstack Software Engineer experienced in building production web, mobile and AI systems for international clients and remote teams. Specialized in independently designing, building, deploying and maintaining production software systems from concept to launch. Experienced across fullstack development, software architecture, API development, cloud infrastructure, AI integrations and SaaS platforms. Proven ability to deliver complete products end-to-end, including frontend development, backend services, database architecture, deployment infrastructure and ongoing production support. Primary stack includes Python, FastAPI, React, TypeScript, PostgreSQL, MongoDB, Docker and cloud technologies.

CORE STRENGTHS

- End-to-end product ownership from concept to production
- Fullstack development for web, mobile and SaaS platforms
- AI solutions including Generative AI, LLM integrations and computer vision
- Software architecture and system design
- Cloud infrastructure and deployment automation
- Database design and API development
- Remote collaboration and cross-functional communication
- Agile development and technical problem solving

TECHNICAL SKILLS

Languages: Python • JavaScript • TypeScript • SQL

Frontend: React • React Native • HTML • CSS • Tailwind CSS

Backend: FastAPI • Flask • Node.js • REST APIs • WebSockets • API Development • Authentication • Authorization • Microservices

Databases: PostgreSQL • MongoDB • Supabase • Database Design • Query Optimization

Cloud & DevOps: Docker • Nginx • Ubuntu Linux • AWS • Git • GitHub • GitHub Actions • CI/CD • Cloud Infrastructure

AI & Automation: OpenAI API • LLM Integrations • Generative AI • AI Agents • Prompt Engineering • Computer Vision • Automation • Chatbots • Retrieval-Augmented Generation (RAG)

Practices: Software Architecture • System Design • Agile Development • Distributed Systems

PROFESSIONAL EXPERIENCE

Contract Fullstack Software Engineer (AI & Systems)

Nuvantica Software (Renovality Group) | Czech Republic | Remote September

2025 – Present

- Lead engineer responsible for building and deploying AI-powered production systems for commercial use.
- Architected and delivered the Skinraya AI skincare analysis platform, independently owning frontend, backend, AI workflows, database architecture and deployment infrastructure.
- Developed computer vision and LLM-powered workflows that automate skincare analysis and recommendation generation.
- Designed PostgreSQL data architecture and backend APIs supporting production workloads.
- Managed Linux infrastructure, Nginx, Docker deployments and cloud-hosted services to ensure reliable system availability.
- Consistently deliver complete features independently from requirements gathering through production release.

Customer Experience Associate – Outbound

Omni Contact Centre | Harare, Zimbabwe

April 2026 – Present

Concurrent role focused on customer engagement, communication, sales and relationship management.

- Conduct high-volume customer engagement campaigns while maintaining service quality standards.
- Resolve customer issues, enquiries and retention challenges through effective communication and problem solving.
- Maintain CRM accuracy and compliance with operational procedures.
- Collaborate with internal teams to improve customer experience outcomes.
- Strengthened communication, negotiation and relationship management skills applicable to client-facing software projects.

Independent Fullstack Software Engineer

Freelance Client Projects | Worldwide | Remote

July 2023 – August 2025

- Designed and delivered production SaaS, AI and business systems for clients across multiple industries.
- Built fullstack applications using React, TypeScript, Python, FastAPI, Flask, MongoDB and PostgreSQL.
- Developed AI-powered automation tools, messaging platforms and workflow systems to improve operational efficiency.
- Managed software architecture, cloud infrastructure, deployment pipelines and ongoing production maintenance.
- Delivered complete solutions independently from requirements gathering through deployment and support.

Contract Fullstack Software Developer

ESpace | Harare, Zimbabwe | Remote

February 2021 – July 2023

- Served as the primary external engineer delivering software solutions for agency clients.
- Built and deployed fullstack web and mobile applications using React, React Native and Python.
- Translated client requirements into production-ready software solutions.
- Worked independently as the sole engineer on assigned projects.
- Managed deployment, debugging, maintenance and feature enhancements throughout project lifecycles.

Freelance Software Developer

Independent Client Projects | Remote

July 2019 – January 2021

- Developed websites, web applications and business systems for local and international clients.
- Built frontend interfaces using React and backend services using Python and REST APIs.
- Worked directly with clients to gather requirements and translate business needs into software solutions.
- Managed application deployment, hosting, maintenance and troubleshooting.
- Established practical experience delivering production software independently.

Intern Fullstack Software Developer

Health Informatics Training and Research Advancement Centre (HITRAC) | Harare, Zimbabwe

August 2018 – July 2019

- Developed frontend applications using React and mobile applications using React Native.
- Contributed to backend development using Java Spring Boot.
- Supported implementation of Zimbabwe's national Electronic Health Records system (Impilo).
- Trained healthcare professionals on EHR usage and provided technical support during deployments.
- Gained practical experience building and supporting large-scale health information systems.

SELECTED PROJECTS

Skinraya – AI Skincare Analysis Platform

Production AI platform built for real-world commercial use.

Project: <https://app.skinraya.cz>

Key Contributions

- Built and maintained the complete frontend, backend and AI processing pipeline.
- Implemented computer vision workflows for skin analysis.
- Integrated AI-driven recommendation generation.
- Designed and deployed production infrastructure.
- Delivered a live AI product actively used by real customers.

Technologies: React • TypeScript • FastAPI • PostgreSQL • OpenAI • Computer Vision • Docker • Nginx • Ubuntu Linux

CubePOS – Point of Sale & Business Management Platform

End-to-end POS and business management platform designed for retail operations.

Key Contributions

- Designed and developed frontend and backend systems.
- Implemented inventory management, sales tracking and reporting functionality.
- Built scalable APIs and database architecture.
- Managed deployment and production hosting.

Technologies: React • Python • MongoDB • REST APIs • Docker

Skin Segmentation Dataset Builder

Automated dataset engineering tool designed to transform skin classification datasets into segmentation-ready training datasets for computer vision applications.

Project: <https://github.com/micpana/Skin-Segmentation-Dataset-Builder>

Key Contributions

- Developed automated image processing workflows for dataset preparation.
- Generated background-free segmentation datasets suitable for machine learning training pipelines.
- Reduced manual dataset preparation effort through automated processing and validation workflows.
- Designed for skin analysis, dermatology and computer vision research applications.

Technologies: Python • OpenCV • MediaPipe • Computer Vision • Dataset Engineering

Herbal-AI

AI-powered recommendation platform that generates personalized herbal and wellness suggestions using large language models and structured user inputs.

Project: <https://github.com/micpana/Herbal-AI>

Key Contributions

- Built AI-assisted recommendation workflows using modern LLM technologies.
- Implemented backend services for user profiling, recommendation generation and response processing.
- Designed API-driven architecture supporting scalable AI interactions.
- Incorporated safety-focused recommendation and disclaimer workflows.

Technologies: React • FastAPI • Python • OpenAI API • LLM Integration • Prompt Engineering

EDUCATION

Harare Institute of Technology

Bachelor of Technology Honours Degree in Information Technology

Graduated 2025

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

The Forage

- Data Labeling Job Simulation | 2026

DataLense

- Essentials of Data Labeling & Annotation for AI Development | 2026
- Human-in-the-Loop (HITL) QA & Data Quality Management | 2026
